Microdeal's Cuthbert in the jungle

## Microdeal in court battle

TEN software houses are this week taking action in the High Court against a commercial software piracy racket, in an attempt to prove that software is copyright.

Cornwall-based games company Microdeal unearthed a tape piracy racket involving thousands of pounds worth of Dragon software being sold through classified advertisements in computer magazines.

Games such as Softek's *Ugh!* and Microdeal's *Frogger* and *Cuthbert* series were being copied on a large scale and

offered to Dragon owners at a fraction of the retail price.

Dr Mohammed (a medical doctor) and his fourteen-year old brother T Mohsan, it is alleged ran a tape copying operation from four different addresses in the Blackburn area, selling not only sets of 35 games on a single C90 tape, but also utilities such as *Kopy-key* program copier and the *Text-star* word processor.

"Other companies apart from Microdeal and Softek who had games copied inclu-

continued on page 5

## Dragon moves to Spain

THE future of Dragon Data, which has been in receivership for over five weeks, now looks settled.

The Port Talbot manufacturing plant will be closed, and a Spanish company, Eurohard SA, who exchanged contracts with Dragon Data two weeks ago, will take over manufacture of the Dragon machines. Eurohard operate from a site in Extre Madura near the Portuguese border, a Spanish development area. Details of the deal are to be finalised this week.

Eurohard was set up with Spanish government aid specifically to build up the Spanish

hardware industry. Before the receiver was called in to Dragon Data, Eurohard was negotiating with the company to gain a licence to manufacture Dragons in Spain.

Not all Dragon employees will lose their jobs, however. A new company, Touchmaster, is being set up headed by Brian Moore, ex-managing director and former marketing director Richard Wadman. Touchmaster will provide after sales services and software support in this country.

GEC will continue the marketing of the Dragon machines in the UK.

Richard Wadman

Brian Moore

## Commodore sues

COMMODORE International is suing four of its former engineers — now working under Jack Tramiel at Atari. The suit, against former engineering director Shiraz Shivji and three others, Arthur Morgan, John

Hoening and Douglas Renn, was filed in Chester County, Pennsylvania on Tuesday, July 10th. The judge granted Commodore's request for a temporary injunction.

Imagine always flew by the seat of its pants. And now it's gone.

It would be easy to say it failed because of bad management, imprudent financial decisions and internal wrangling. These may have all contributed, but none would have led to Imagine's downfall if were it not for the present state of the home computer software industry.

To say it's quiet would be an understatement. Software just isn't selling. Christmas was disappointing, and the first six months of this year have been disastrous.

It is not for nothing that software houses have suddenly started taking a serious interest in questions like piracy. Who cares in a boom time? Things are different now. Why do you suppose that some companies are joining the budget software bandwagon?

Why are others selling off their back catalogue at heavy discounts?

Nothing has moved since January.

The sensible companies battered down the hatches in March and conserved their resources waiting for the expected up-turn in September.

If things don't pick up dramatically in the Autumn then we shall see many more casualties.

And the companies which fail will not necessarily be those with poor games. It will be the small innovative houses which will go to the wall. Lumbering giants like Thorn EMI, and CBS will be around to pick up the pieces.

Breaks your heart, don't it?

## Microdeal

continued from page 1

ded Tandy, Cable, Dragon Data, Morrison Micro, Programmers, Guild, Romik, Quicksilver and PSS," said Microdeal managing director John Symes.

At a private hearing on Monday, July 9, Microdeal obtained an Anton Piller search order and on Friday, July 13, Mohsan and Mohammed's house at 24 Irving Place, Blackburn was raided and a number of boxes of tapes and duplicating equipment were seized.

An injunction also obtained by Microdeal to prevent Dr Mohammed from continuing to sell and advertise pirated tapes has been extended until a court hearing is held at the High Court in London on Friday, July 20. An application on Monday, July 16 for a similar extension to cover T Mohsan was refused.

## Commodore

continued from page 1

The suit covers alleged theft in May and June, referring to secret material about a business machine based around the Z8000 chip planned by Commodore for next year.

The action is seen as part of the increasing bitterness between Commodore and its former founder Jack Tramiel, whose company, TTL, has taken over Atari. Several former Commodore senior executives are now working for Tramiel, including David Harris, a former Commodore vice-president, now sales vice-president at TTL.

## Mastertronic takes over Carnell

MASTERTRONIC has come to the rescue of Carnell Software, who went into liquidation last month, (see PCW, 11 June).

It has set up a new company, Innovision to market Carnell's *Wrath of Magra* and *Black Crystal* games. It is not yet known if Carnell's *Volcanic Dungeon* is also included in the deal.

The two games will be sold at their original price — £11.95 for *Magra*, with the book inclu-

## BBC stays with Acorn

A NEW four year contract has been signed between Acorn Computers and the BBC.

The agreement means that Acorn can continue to use the

Acorn is planning to expand its manufacturing and distribution of the Model II machine. It has also begun an export drive to sell the machines in the US and

Left to right: Hermann Hauser and Chris Curry of Acorn, Bryon Parkin and Bill Cotton of the BBC

BBC name on its top selling product — the BBC Model B micro computer.

The signing also ends months of speculation that the BBC might take the opportunity presented by the expiry of Acorn's existing agreements to include other manufacturers.

A number of companies including Sinclair and Dragon have in the past shown interest in gaining the lucrative BBC contract.

Following last week's signing

the Germany and Benelux areas of Europe. Manufacturing facilities are being set up in Australia, India and China.

"Acorn is planning to develop more power add-ons for the BBC to take it into the 16-bit and 32-bit computer range," said an Acorn spokesman.

"The BBC contract has become a very significant one for Acorn — in the beginning the Model B was seen as a fairly minor machine."

## Robin Hood on the Spectrum

THE legend of Robin Hood has been turned into an adventure game by Nottingham software house Runesoft.

*Robyn Hode* has over 400 locations, set in Nottingham and Sherwood Forest.

"We did a great deal of research to make the locations as authentic as possible," said John Flack of Runesoft.

"The city library had some

maps, although none prior to 1610, so we consulted the Domesday Book to see how the land would have looked."

The game uses landmarks apart from Sherwood Forest — part of the adventure takes place in the cave system underneath Nottingham castle.

*Robyn Hode* for the 48K Spectrum costs £9.95.

## Imagine in hands of Receiver

THE Official Receiver has now been called in at Imagine Software.

The company was wound up on Monday, July 9, at the High Court in London, after Imagine failed to pay creditors VNU, Business Publications £10,000 within a seven day time limit.

A creditors meeting has yet to be arranged, but until a receiver has been appointed, the Official Receiver in Liverpool is standing in.

But there is a long list of other creditors still waiting to be paid by Imagine including Kiltale, a Gloucestershire duplication plant, Marshall Cavendish, still waiting for payment in the region of £250,000, Liverpool City Council, printers Henry Matthews and Son, United Arab Shipping, who own Tithe-barn House, where Imagine occupied offices, Scatchards, a Liverpool wine merchant, where Imagine had an account and G D Studios, which produced cassette labels and artwork for the company. The total of debts from these companies is put at over £300,000.

Former Imagine directors Dave Lawson and Ian Hetherington — together with several ex-Imagine employees — are believed to be still continuing development of the two Megagames, for which they now own the copyright.

Bruce Everiss is in negotiations with an unnamed, non-software company in Liverpool, regarding employment of other former Imagine staff.

## Thorn EMI buys stake in Inmos

THORN EMI has paid £95m for a 76 per cent stake in Inmos, the government supported microchip company.

It may also buy the remaining 24 per cent, currently held by the company's three founders and its employees.

## Strong offence

While I have great respect for Boris Allan, I found his Ziggurat in Vol 3 No 25 incredibly biased and inaccurate.

As a computer journalist that has written reviews for over 80 software packages and books and know a large number of similar reviewers, I take strong offence at the laissez-faire attitude he believes that we take when performing our work.

I agree with him that all reviews should have the reviewer's name assigned to them, but cannot agree with his comments that most reviews fall into his Fab (front and back) category, where the reviewer just reads the title page and the back cover copy. My feeling is that Boris is unapologetically smarting still from reviews of his latest book on the QL.

Come on now, Boris, don't let some sour grapes spoil what is otherwise an excellent vineyard of articles from your pen.

Clive Gifford  
18 Edward Way  
Ashford  
Middle

## Variable names

I felt I must reply to Julian Skidmore's letter in the June 28 issue about the 'latest' Spectrum bug.

Yes, Julian deserves a 'silver' medal for noticing the bug in the way the Spectrum (and the ZX81) gets confused over variable names that have 'embedded space characters'. For example

LET ANSWER=1  
PRINT ANSWER JULIAN  
which gives 1

So what is the problem? Well, the space character is taken to mark the end of the variable name: and if there is already a variable that matches exactly then its value is used — Oh dear!

For those that are interested, look carefully at Page 142 (11 lines from the bottom) of *The Complete Spectrum Rom Disassembly* by Dr Frank O'Hara and myself.

I would like to hear from

anyone with other 'new bugs'.

Ian Logan  
Skellinhorpe  
Lincoln

PS. Reassure Graham Taylor that QL *Quill* really works, this letter is actual proof!

## Never again...

As a subscriber to your excellent paper I would like to draw attention to the editorial in the June 28 issue which states "This magazine does not carry adverts for tape copiers..." Yet on page 80 there is a half-page advert from a company called Micro Centre which includes a large section on back-up tape copiers.

It seemed to me rather inconsistent. You should practise what you preach.

Wishing your application every success.

James Turner  
Little Barn  
Longcross Hill  
Arlford Headley  
Hants

Needless to say we have received a considerable volume of correspondence on this subject. Our editorial policy stands: we do not carry ads for tape copiers. The offending advert to which you refer will not be carried again in that form.

## A mixed blessing

Thank you for noting our timely arrival at Rumbelows. I would like to point out that

"Isn't that Barry Norman's signature?"

the RRP of the games/educational stuff is £7.95 — and that *Electro Freddy* has been done an injustice at £4.95 on Page 54 of Issue 26.

To be given in your news piece an accolade in the same breath as the lamented — and nearly mythological — Dragon (who now also appear to have produced the "Dragon 36" (sic)) is perhaps a mixed blessing. Maybe you would cheer us all up by noting that IBM too has a reputation for delivering when it says it will.

Congratulations to the Grandiad of Little Newport Street. It's quite comforting to know of others who make the occasional typo too. Valhail indeed! Yours sincerely,

William Poel  
Amsoft  
Brentwood House  
169 Kings Road  
Brentwood

## What's happening?

I've now been buying your magazine for two years, and have seen it change from a user's magazine to more of a games mag, for people who like playing video games on their computers.

I've noticed this with most magazines. What's happening? Has the country gone video games mad? Games adverts, joysticks, cartridges, games reviews etc. It's nothing but games, games and stupid, boring games. If people want games then why don't they buy Atari VCSs or other equivalents — not computers.

Not that I'm implying that people who buy computers must program, they can do what they like. But why do others who want to do something constructive with their machine have to suffer by purchasing magazines and not being able to find the information other than games listings and adverts.

I was also disappointed at this year's Earl's Court Computer Fair. On paying three pounds I entered an arcade. I left regretting I had ever entered, with explosions and laser sounds still buzzing in my ears. Why didn't they rename it 'Vi-

deo Games Fair', because that's all there was.

Christopher Owczarek  
Feldon  
Cook Lane  
High Wycombe

## Crosser and crosser

Just though I'd write and tell you how angry I am after reading your June 28 issue. Yet another chemistry symbols program! Why? It makes me seethe.

Have you not published enough of these tried and (yawn) tested programs. It makes me angry. So angry I could break my pen in half.

Mr Angry  
15 Whitelrose Avenue  
Dalton  
Huddersfield  
Yorkshire

## Deserved success

The QL is here! I ordered it in the middle of February and received it on the 22nd of June (promised delivery date of end of June). It came with the revised AH operating system stored internally (ie, no EProm) and seems to have most bugs corrected. The Basic and microdrive access seems to have been considerably speeded up. (*Quill* (80K) loads in 30 secs compared with two minutes for the pre-production model). It came with a comprehensive User Guide with beginners guide and keyword dictionary.

One tip that I've found is that pressing CTRL + F8 during listing acts as a stop/start toggle. I've managed to interface my Brother EP-22 with built-in RS-232C with the QL — it requires OPEN #3,seric and BAUD 300 to print to Channel 3.

Superbasic highlights structure and puts BBC Basic in the shade — I was also impressed by the speed of the graphics and flexibility of their syntax. The Psion packages seem to be tremendously good value, utilising power with a good user interface.

All in all, the QL, in my view, deserves all the success it will no doubt receive.

## Watch out for HI BOUNCER!

leaping your way - a test of speed and tactics with four screens each with eight stages. Keep Mr. Bounce working hard and score points... if you can! HI BOUNCER! tests reflexes and game tactics to the limit. It's so tough that a separate 7-level practice program for kid brother (or dad!) is included.

On cassette for the BBC B (versions for the CBM 64 and Spectrum coming soon). £6.95

Discover the excitement of creative computing with

## GO SPRITE

a versatile, easy-to-use sprite editor for the Commodore 64 which also demonstrates animation sequences on-screen.

With a choice of joystick, lightpen or user-definable keyboard control Go-Sprite has an icon-driven command system for ease and speed of use.

Go-Sprite can handle up to 32 HiRes or Multicolour sprites and produce overlays up to seven layers.

Sprite data files can be made on disk or tape and two accompanying programs enable you to produce data and arrays for use in your own programs.

For the Commodore 64, on cassette £9.95; or disk £11.95.

All prices are inclusive of VAT. Mirrorsoft programs are available from larger branches of Boots, John Menzies and W.H. Smith and from other leading software stockists.

## Go hunting with CAESAR THE CAT

Help Caesar clear the larder of mice. Hunting along crowded shelves you guide Caesar as he chases persistent mice which are devouring plates of food. Widely praised when launched on the CBM 64, acclaimed on the Spectrum, Caesar is now here for BBC B owners.

On cassette for BBC B and Spectrum £6.95 and CBM 64 £6.95.

## Cuddle your own CAESAR

We have had so many requests for a soft-toy version of Caesar, the lovable black and white cat featured in our much praised program Caesar the Cat, that we have had some made.

He is cute and cuddly, with a body length of approx. 12 inches. He is yours (mail order only) for £8.50 (inc. p & p), while stocks last.

# Turf luck

You can bet Neil Watson's horse racing game for the 48K Oric will be a winner

If you have ever wondered what attracts people to the atmosphere of the race course then this is your chance to find out. *Turf luck* is a two stage horse race program for the 48K machine. During the first stage you are given details of horses' names, ages, starting prices and of the race course (name, going). From these details you must decide how much of your money to bet and on which horse to place your bet. Your ultimate aim is to break the bank.

During the second stage you must sit back and watch your horse run against its nine rivals in the race. Your horse is identified by its colour being different from the rest. After the race has finished your money is updated and you are able to try again in the next race if you have any money left.

## Line comments

0001 - 0005 Set up horses' names  
0006 - 0010 Set up constants

# Taking no chances

Graham Taylor talks to the kings of budget software, Mastertronic

If you buy software you cannot fail to have noticed the fact that Mastertronic is doing rather well.

The reason has something to do with — but is not explained by — the fact that Mastertronic games cost £1.99.

The company's rapid expansion suggests that people like the programs but the company remains controversial — its pricing policy received a hostile reception from the rest of the industry.

I talked to its director Martin Alper and he put up a spirited defence of the company and its objectives. "There's no doubt that we are pretty unpopular amongst the software houses trying to sell their titles at £5.95 — they say that we set a dangerous precedent and that if all software houses were forced to drop their prices to similar levels by our actions it would reduce the amount of innovation and experimentation.

"But it's simply untrue. From the profits we make a large amount will be 'put back' to be used as investment capital on new projects — Mastertronic is just the start."

You can see where criticism comes from though. For a long time the commonly held belief (and magazines are as much to blame as anyone) was that issuing games at £1.99 was simply a way of getting rid of fairly poor quality material.

When I finally got around to looking at some Mastertronic games it was something of a revelation — none of them were awful and some were actually very playable. At £1.99 they were excellent value. The problem so far as the press is concerned that 'good value' pure and simple is not really something that inspires great reams of enthusiastic prose — being neither a wonderful technical achievement nor an appalling waste of money is the best way to

on £1.99 rather than going elsewhere and getting a share of £5.95 — the reason is simple we sell many more copies and our distribution is worldwide." Its American distribution takes in 6,000 outlets including hifi, computer and video shops. The video link is particularly interesting. You can't go into a video rental shop these days without seeing the Mastertronic range.

Mastertronic see the American market as particularly important. "We're moving half of our operation to the US and we will be bringing out souped-up versions of some of the range there on disc," America Martin also hopes to repeat the success of the British operation in getting the games into supermarket chains like BHS, Asda and Tesco. "The problem with the conventional retail outlets," he says, "is they don't encour-

age the impulse purchase — supermarkets are much better at that."

Financial success means that Mastertronic are now in the market for acquiring software houses. Their timing couldn't have been better with many companies in a precarious position after disappointing winter sales and so far a disastrous summer. Mastertronic has already taken over Galactic Software and a deal with Camel Software is currently being finalised. "What we are buying is talent — plenty of companies have failed not because they lack programming expertise but simply because they had no marketing skills — we can put that right."

If Martin is right, Mastertronic could end up having an incredible hold on the market. Which is either wonderful or awful depending on your degree of paranoia. I put the case for the paranoids and asked whether the £1.99 price tag didn't put an end to 'big projects', the *Hobbits* of this world that come complete with manual and box.

"It's certainly true that you can't do expensive packaging for a £1.99 game and

it's also true that at the moment we aren't doing technically earth shaking stuff but there will be other companies we run other than Mastertronic which will be different. The keynote will always be excellent value for money, but we are planning, for example, a company doing discs for about £5.99 which would allow for packaging and more sophisticated programs — the next few months will prove that we can now put out games as good as anyone else's for £1.99. There won't be any element of apology anymore — they'll be cheap and excellent.

"People say we aren't taking any chances as though it were a crime, well it's true we don't take chances — before we put out a new title we do market research and we do that research on a worldwide basis." According to Martin that research tells him that, amongst other things, MSX is going to do well. "We are certainly doing MSX material, there may be some doubts about what happens to MSX in this country where the computer buying habits are probably less conservative. But everywhere else there is a vast untapped market of potential computer buyers who will be reassured by a name they know like Sony, or JVC.

## "... cheap and excellent"

You will not be surprised to learn that the MSX working party are rather interested in Mastertronic. MSX is likely to end up wherever the company brand names are stocked — hifi shops, electrical retailers, chains. And who is already in there? Mastertronic — draw your own conclusions.

I never have liked the idea of a small number of large companies dominating markets but then I am always a foolish romantic on these matters anyway. What is undeniable is that a lot of kids can afford £1.99 who can't afford £5.95 or more and now they can buy a lot more programs for their machine (instead of copying them from friends). If Martin is right about the market, Mastertronic games could get better and better. Also if Mastertronic succeed at this then a lot of likeable and talented people are going to go out in business — all part of capitalism's rich tapestry.

Martin Alper wants to have his cake and eat it — he wants to sell you whatever you want to buy as cheap as he can whilst still making a large profit. But he is a man with ideas. "Did you know that in the far east they have Roms that can handle far more than 32K? — more like 100K in fact. Everyone thinks that 32K is the limit for a Rom but it's only the large degree of capital investment in tooling up required to produce bigger Roms that is holding things up. Supposing I could produce games which came in Rom form and used 100 or more K for, say, £9.99. Really wonderful, complex games, do you think people would buy them?"

I think they probably might.

## "... up the quality"

ensure you get no press coverage at all.

"It has been a problem," admitted Martin "but we're going to change all that — we've made some money now and we're going to up the quality."

Four new games are on the way — still at £1.99 — *Chiller* for the 64, *Psycho Shopper* on the Vic, *Thunderball* on the BBC and *Alcatraz Harry* on the Spectrum. Martin says each is equal to anything currently available at full price on their respective machines. *Alcatraz Harry* is a complex game mixing arcade, adventure and strategy — it has dozens of different screens of — action and *Chiller* is loosely based on *Thriller* by Michael Jackson.

With their current success Mastertronic can now afford to push up the quality "A good programmer can easily make more money by coming to us and getting a royalty

# **INTERCEPTOR MICRO'S LTD**

## ATTENTION! ATTENTION! ALL COMMODORE USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from/on the tape? Then you need a **TORNADO!!** Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 64 and 8K + Vic 20.

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes?! Or get into those unbreakable programs?! Then what are you waiting for, get yourself a

**BREAKER!!** Reset switch and let your computer know who is the boss!! Breaker can be connected to your machine in seconds, no soldering. Included with the Breaker reset switch is extra backup software on tape. Breaker is now available for any CBM or Vic 20.

Available for CBM 64 and the Vic 20 now is the

**ROM-FILE** which contains a complete disassembly of CBM 64/Vic 20 Rom with comments! As well as a complete description of all 6502/6510 instructions and addressing modes + a complete listing of a machine code monitor and more!

Please make cheques/PO payable to:

## Redskins v Raiders

**Program** *Superbowl* **Price** £6.95 **Micro** Dragon 32 **Supplier** Cable Software, 52 Limbury Rd, Luton, Beds LU3 2PL.

This is an arcade game based on American football. The player controls Floyd presumably a Raider, Redskins, Rowdy or some such animal, going for the touchdown. Each play ends when four stops have occurred, each of which is either a successful touchdown or a tackle which has brought Floyd down. At the end of the play the score is displayed as yards run, average yards run, number of touchdowns and missed catches.

The graphics are quite good, representing an overhead view of the field with Floyd running up the screen and the opposition appearing from the top. The yard lines come down the display as he continues his run. The game is controlled by one joystick and a speed-up option is available.

Essentially, *Superbowl* is a variation of *Space Invaders* with a sports overlay. The interest depends on a knowledge of American football so that the scoring has an imaginative impact making players feel that they are simulating a favourite sport. My son, who enjoys arcade games a lot, found this one disappointing because it was very simplistic compared with other offerings on the market. There is no secondary screen or other challenge. It rather looks as though it is so close to an arcade game that the play runs for as short a time as possible before it needs another coin. Despite its good graphics, this lack of variety will limit the length of one's interest.

Derrick Trueman

## Waves of attackers

**Program** *Orc Attack* **Micro** Commodore 64 **Price** £7.95 **Supplier** Thorn EM1, Film House, 142 Wardour Street, London W1.

In *Orc Attack* from Creative Sparks you find yourself in the role of Sir Eric the Brave, who has to defend the battlements of his castle against the attacking hordes of Orcs.

The attackers come in waves, each one more determined than the last. Most of the Orcs attempt to scale the castle walls and set about Sir

Eric with their daggers. However, a few remain on the ground and fire their lethal crossbow bolts at him. Sir Eric can defend himself by dropping rocks on his attackers, or by beating them off with his broadsword, or by pouring down burning oil.

Quite an entertaining game, but all the attack waves are basically the same and all the action occurs against the background. It soon becomes rather repetitive; the graphics and sound are OK, but lacking any real variety. This game is unlikely to become a favourite.

Richard Corfield

## Downhill slalom

**Program** *Horace goes Skiing* **Price** £5.95 **Micro** Dragon 32 **Supplier** Melbourne House, Church Yard, Tring, Herts HP23 5LU.

*Hungry Horace* has arrived on the Dragon 32 and is off on another challenge. This time he sets off with £40 in his pocket with which to go skiing. He has first to cross a busy road to hire his skis at £10 a time and cross back over the road on the ski slope. It will cost him another £10 in ambulance fees if he gets knocked down. Once back safely to the ski slope, he has to negotiate a downhill slalom course. Points are lost for failing to stay within the flags, and if he hits too many trees on the way down, his skis are broken and he has to cross the road again to hire new ones. If he is successful, more points are awarded and he must then cross the road to the next, more difficult,

slope. The game ends when he runs out of money.

This is an excellent game with superb graphics. Obviously, it is basically a mixture of *Frogger* and the 'steering through obstacles' type games but it is packaged excellently. The use of colours on the Dragon is fresh and bright and the images (particularly the cars) and sound very good.

There is, however, a cheat factor. Points are gained for crossing the road, of course,

but they can also be gained by a run out into the traffic and back again to the start point. The astute player can work wonders with his score with that. The game is long enough and varied enough for enjoyment to last; the graphics are excellent and it seems to have been put together with that little extra flair that makes it instantly attractive.

Derrick Trueman

## Capture the answer

**Program** *Frac Attack* **Price** £6.95 **Micro** BBC B **Supplier** Shards Software, Roycraft House, 15 Linton Road, Barking, Essex.

If you cringe (as we did) at slogans like 'Fractions need never be boring again' keep reading: *Frac Attack* makes it true. Honestly!

Shards have come up with a real winner in this part of their 'Fun to Learn' series. There are six games — yes games, not exercises — to help you practise fractions. All six load up at once so you move rapidly by a menu from one to another. Each offers different levels of difficulty and the top ones are really tough. The company say this is for 9-15 year olds but we know plenty of over-21s who would learn from this package.

The best game is *Frac Attack* itself, where in a mini-

continued over the page

ture 'Rocket Raid' type scene you have to work out a fraction, then bomb two wrong answers and capture the right one. The screen scrolls very quickly and getting the answer right is the easy bit — hitting your targets is much harder.

The silliest game is *Hungry Radish*. He will eat the person of your choice... if you choose the larger of two fractions correctly.

There's lots of colourful screen action in the Mode 7 scenes, blips, boops and a nice tune when you succeed. A running score tells you how well you're learning — in case you'd forgotten the purpose of the fun, as well you might. Too noisy for schools perhaps, but superb for the home.

Dave & Jan Waterson

## Correct choice

**Program Readright Micro**  
BBC B Price £9.95 Supplier  
Daco Software, 59 Mackenzie  
Road, Moseley, Birmingham  
B11 4EP.

Hallo. That's the friendly greeting at the start of this educational package. You can find this spelling in a dictionary, but it is not the one in everyday use. Unfortunately a minus mark for an otherwise good educational package for parent and primary school child working together.

Someone who can read has to help the learner by checking that he or she is correctly pronouncing the words offered. *Readright* will check whether the words are used properly in simple sentences. If the choice is correct a smiling face appears, happy notes are played and the word is nudged into its place in the sentence. If the choice is wrong a sad face appears, miserable music plays and the word is booted off screen.

The way the words are built up is the key to the *Readright* approach. The words are assembled from phonetic groups giving the child practice in the sounds of each letter.

*Readright* is structured, sensible and very effective.

Dave and Jan Waterson

## Break the code

**Program Operation Safras**  
Price £7.95 Micro Dragon 32  
Supplier Shards Software,  
Roycraft House, 15 Limon Rd,  
Barking, Essex

Here is a game to drive you crazy — the follow up to *Pettigrew's Diary* using the same format. *Operation Safras* is an adventure game in three sections featuring secret agent Pettigrew who this time has to save his fellow agents who are in terrible trouble over the British Isles, then rescue the legendary Safras sword and finally return it to its rightful place in the Safras caves. No progression can be made anywhere until the current problem is solved. But these are not just maze problems. Far from it.

In the first section some 'animated' graphics set up a challenge, then a password has to be found to avoid drowning. This is followed by a memory test and a further code pro-

blem. Failure causes re-cycling back to an earlier position with no little frustration. The second section, which is text only, is an 'Against the clock' part and involves locating and rescuing five agents scattered somewhere in Britain armed only with a geography lesson from the program. All this leads eventually to the rescue of the sword. The third section is split into eight separate challenges graphically presented with each preceding by a text screen until the world is saved once more.

The problem with these games is that once the problem is solved, it's over and there is no more to be done with it. But the time involved in solving this one and the variations in the types of problem presented, let alone the quality of the graphics and sound, make this one worth having. They are even giving away a free music tape. Pettigrew needs your name and address!

Derrick Trueman

## Planet to planet

**Program Star Trader Micro**  
48K Spectrum Price £6.95  
Supplier Bug-Byte, Mulberry  
House, Canning Place, Liver-  
pool.

Strategy games got off to a bad start for the first year and a half of the Spectrum's life. They were mostly badly written, unexciting Basic games.

Now here comes *Star Trader* from Bug-Byte. The idea behind the game, is that you move from planet to planet, buying goods where they are cheap, and trying to sell them at a profit. As with other strategy games, this part is fairly simple, with rather few variations. There is, though, the added excitement of an occasional arcade-type interlude. (I mean a real arcade game, unlike the so-called arcade game in *Mugsy*). In this, the graphics are good, the action fast, and I

have yet to win.

There are several features, though, which spoil what is an otherwise good game. When you earn much more than 100,000 credits, (which, with practice, does not take more than about an hour), the computer ends the game — not because you have won, or because you have done something wrong but because of a revolution somewhere in space, with which you are totally unconnected. Yet you are killed — end of game. This really does seem unfair and it removes the incentive to do as well as you can.

Surprisingly for Bug-Byte, the character set is not redefined and, in a game like this, that would be quite an improvement. Sound, too, is all but nonexistent.

Nevertheless, this game is of more lasting interest than almost any arcade game that I can think of, simply because, play it, you need your mind as well as your reactions.

David Lester

## No throw!

**Program Athlete Micro 48K**  
Spectrum Price £5.50 Supplier  
Buffer Micro Road, 310  
Streatham High Road, London  
SW16.

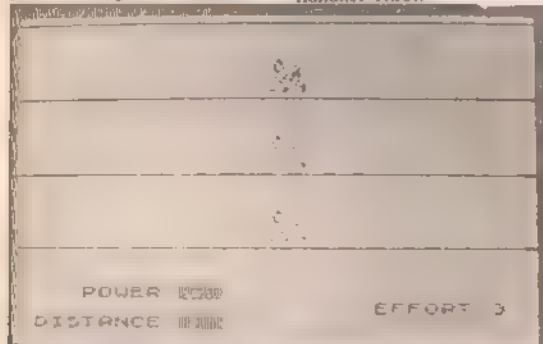

Running, hurdling and throwing the hammer are all part of a day in the game of life of an *Athlete*. The game is different and for that reason alone it should deserve a place in the dedicated Spectrum owner's library. Unfortunately, though, there are problems that will put off many potential buyers.

To start with, the good points. The game, a blend of

computer game, giving you a fixed store of energy, and allowing you to decide how fast you will use it. Go too fast, and your athlete collapses exhausted; too slow, and you finish last!

Sadly, however, the game is not bug free: it got into one endless loop at the Menu stage, and suffered a system reset during the events themselves. Possibly this was in disgust at my 'No Throw' the Hammer, but I think it is more likely to be a software problem than game feature.

Lastly, the Menus are long and involved, and the events limited: 100m and 400m along the flat and hurdles, and the Hammer Throw.

Basic and machine-code, has good graphics and generally works well. I liked especially the way the runners' movement was done. The author has done well to turn a physical sport like athletics into a

*Athlete* is a good try, but if the problems can't be sorted out it will have rank as an also ran.

Simon Springett

## Kamikaze pilot

**Program Supercode II Micro**  
16/48K Spectrum Price £9.95  
Supplier CP Software, 17 Orchard Lane, Prestwood, Great Missenden, Bucks HP16 0NN.

**3D TANK DUEL** provides exactly what you would expect from its title — a version of the arcade game *Battle Zone*.

The game shows the view from inside your tank looking out on the line-drawing features of flat plain, with the odd smoking volcano in the background. A turret radar shows the location of the opposing tank, and you are given subtle

hints (like "Enemy Left") just in case you still don't know

## Straight flush

**Program Poker Micro**  
Commodore Price £5.95  
Supplier Tom Pinone Puzzles,  
14 Granby Avenue, Harpenden,  
Herts.

It is debatable whether computerised card games

work — why not just get a pack of cards and play the game for real?

However, playing the computer at *Poker* does have some advantages — not least you do not play for real money. This version of poker, by Tom Pinone, is set in a Western saloon, and your six opponents are given suitable names: Matt Dillon, Billy the Kid and Black Jake.

The deal rotates round the seven players and the screen shows the cards being dealt

face down in front of each person. When the deal is complete your cards are turned over for you to see. The game then follows the rules of poker with each player taking it in turn to raise, stick or throw in the hand. The computer plays for your opponents, and will occasionally bluff, although it never cheats. You have to make your own deci-

sion, but you can always ask the barmaid Moll for advice (by pressing a function key).

The graphics and sound are simple but perfectly adequate for the program. Instructions are provided including a brief explanation of the rules of poker.

This is really quite an enjoyable game and could provide a financially painless introduction to poker.

Richard Corfield

where to go next. The idea is to manoeuvre your own vehicle to the right place to zap the

other tank, and then look out for the next one.

Difficulty is increased by the various objects scattered across the area which act as barriers to your fire — and as your score increases the enemy tanks adopt the tactics of sitting behind these barriers and only emerging to take pot shots at you. At irregular intervals a rocket-shaped UFO controlled by a Kamikaze pilot skims across the plain towards you adding to your problems.

There's not much more you can say about *3D Tank Duel*. I would recommend it as a very good version of the original, but I don't think you'll get addicted.

Simon Springett

## COURSEWINNER

### The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker.

- COURSEWINNER contains a database full of detailed information on all English and Scottish flat courses. The ten leading jockeys and trainers, and effect of the draw is detailed for each course.

This information can be displayed on the screen at any time.

- The program analyses these factors combined with the results of the last three outings, starting price and weight carried.

- COURSEWINNER is simple and quick to use, yet very powerful!
- Based with detailed instruction booklet.

**Price £12.50 all inclusive** IMMEDIATE DISPATCH/RETURN OF POST

Available for: SPECTRUM 48K, BBC(B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI 48K.

## POOLSWINNER

### The Ultimate Pools Prediction Program

- POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.

- Can be used for Scoredraws, Drives, Aways and Homes.

- The database contains over 20000 matches (10 years league football). It updates automatically as results come in.

- The precise prediction formula can be set by the user. This allows development of your own unique method.

- Package is complete with program, database and detailed instruction booklet.

**Price £15.00 all inclusive** IMMEDIATE DISPATCH/RETURN OF POST

Available for: SPECTRUM 48K, ZXII (16K), BBC(B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI 48K.

Available from dealers or direct (return of post) from

# **SALES DIRECTOR CIRCA £30,000**

Our clients are one of the UK's leading distributors of home computing software.

On their behalf we are hunting for a sales director who can conform with their exceptionally high standards of service and ethical trading.

The person appointed will have a proven record of high level sales negotiation and experience of dealing with multiple retail outlets is essential.

Applicants should be resident in North London or Home Counties.

This is a first class opportunity for a young person to establish him/herself at director level in a dynamic forward thinking company.

It is unlikely that anyone much over the age of 30 will be happy working with the current management team.

The excellent salary package comprises a basic £20,000 which will extend to £30,000 with commission, a company car and all the usual benefits associated with a key position in a highly successful company.

We need plenty of time to discuss this position with interested applicants, so we would ask you to ring us after 7.30 pm

on 058285 2992.

Please note telephone enquiries only will be considered.

**AMS BUSINESS CONSULTANTS**

23 Commercial Road,  
Southampton SO1 0GF

# Message to screen

Alan McDonald shows you how to print information to the screen in Part 2 of his machine-code adventure series

As week we looked at how a mini adventure can be designed. We also wrote the database section of the adventure. This week we shall look at the 'printing to screen' routines. If you remember from last week, we had three types of data:

- 1) Locations,
- 2) Objects,
- 3) Messages.

Each of the data is handled differently, therefore we need three different routines.

## Routine 1. Print message to screen.

Since this routine is the easiest we shall look at it first. Refer to last week's issue and see how the messages were stored in memory.

```
MTABLE DEFB 255 : separator.  
        DEFB "message"  
        DEFB 255
```

and so on.

If you look at the first five messages in the message table you will see.

- 1) Ok.
- 2) You can't do that.
- 3) You can also see...
- 4) Nothing.
- 4) What now?

Let's say we wanted to print message three to the screen. (You can also see). All we would do is:

TLD B,3: The B register points to message three.

CALL PRINT: The print message routine is called.

The actual 'Print' routine is not too difficult to understand. Remember each message is separated by a '255' — Therefore we count 'B' '255's' is, if B=3 then we count 3 '255's'. The following flow chart should clarify things. Also you should closely study this week's assembler listing.

The other routines work in a similar way. If you recall we used the variable X to store the current position of the player; ie, if the player is at location 5 then X would equal 5.

## Routine 2. Print location to screen

Each location in the database is followed by a '255' and 6 other bytes, which represent the directions which can be moved to. Each time a location is printed these values will need to be copied into their correct positions in the variable area. (NOR to DOW). Again study this week's assembler listing, pay special attention to the print location routine PLOC.

## Routine 3. Print objects to screen

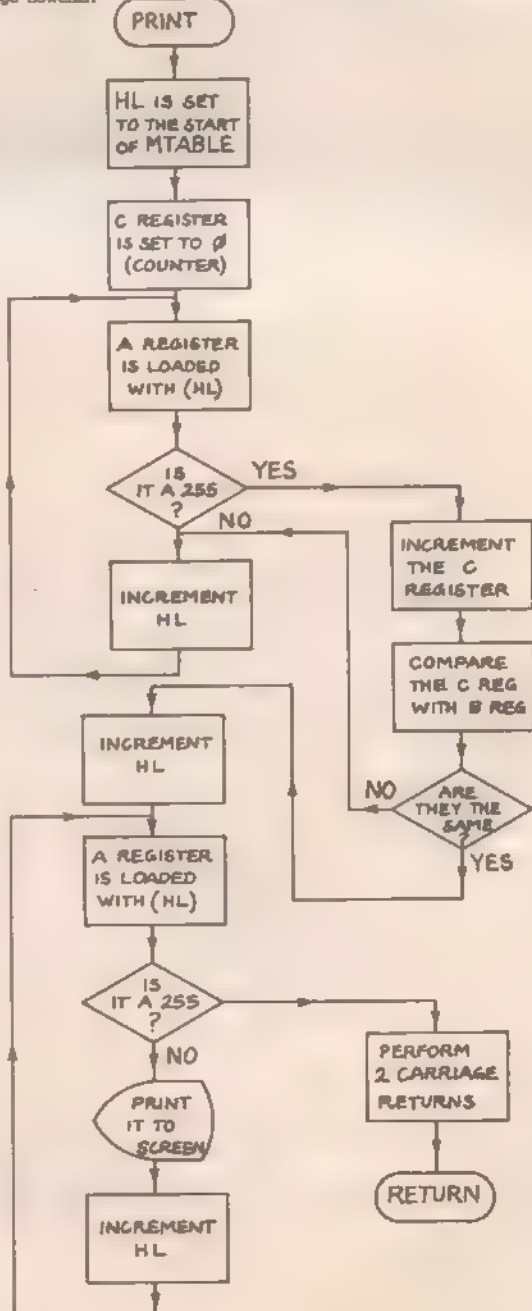

The print objects routine is the most complex of all three routines. Each time a location is printed, any objects which are visible there must also be printed. Therefore the print object routine must do the following.

- 1) A loop is started. 14 objects = 14 passes.
- 2) If the object is not at the current location then consider the next object.
- 3) Can the object be printed; ie, is the

existence 0 or 2 (see last week's issue.) The flowchart depicts the situation as does the assembly listing.

Next week we shall look at input and string manipulation.

## Round the clock

Ian Logan presents a clock program that demonstrates a large number of the features of Superbasic

The Superbasic of the QL is very different from the popular Sinclair Basic found in the Spectrum; and it will take some time for a new owner of a QL to become fluent in its use.

The following program produces both 'analog' and 'digital' clocks and shows a large number of the features of Superbasic. Initially, you might think that the listing is more like one for the BBC microcomputer; and with respect to the manner in which Superbasic allows the use of named procedures, you would be correct. But, Superbasic allows a lot more than just the use of procedures.

So, taking each section of the program in turn:

### Lines 100-290:

The procedure *Set* is defined. Mode 4 — the high definition mode — is selected so as to take full advantage of the QL's potential.

**WINDOW 412,256,0,0** — creates a window of maximum size  
**BORDER 30** — creates a border within this window of width 30 pixels.  
**CSIZE 3,1** — selects the largest of the standard type sizes.  
**CURSOR 0,100** — moves the cursor down 100 pixels within the available window.  
**SDATE 1984.5.1,h.m.s** — this program cheats by using the function *Dates* to store the current time; and this line sets *Dates* to the required time (on 1 June, 1984).

### Lines 310-360:

The procedure *Face* is defined.  
**SCALE 300,150,100** — this line 'scales' the output window to give it 300 graphic-lines (instead of 100) on its vertical scale. The origin of the bottom left corner is given the coordinates -150,-100 (so as to make the centre of the clock face be 0,0). The screen is then cleared and three circles are drawn to represent a clock face.  
**The For a — End for** structure in lines 400 to 530 uses the 'turtle graphics' of the QL to draw minute marks on the clock face at the required positions. The numbers are added to the clock face after first

setting the print cursor to a suitable position (line 630).

### Lines 560-680:

The procedure *Time* is defined.  
 This procedure contains a *Repeat — END REPEAT* structure (lines 610-670) from which there is no exit. And, if the value of *Dates* is found to be changed — as it will be every second — the procedures *Watch* and *Digital* are called.

### Lines 700-790:

The procedure *Watch* is defined. This procedure determines which hands of the clock face are to be re-drawn. If a hand is to be moved, then it is first overdrawn with white ink, before being re-drawn at its new position with black ink.

### Lines 810-890:

The procedure *Hand* is defined. This procedure requires three parameters: *i* — the colour of ink to be used;  
*r* — the angle Turned at the centre of the clock  
*l* — the length of the hand  
 ■ be drawn.

The hands are drawn using the 'turtle graphics' of the QL.

### Lines 910-990:

The procedure *Digital* is defined. This simple procedure prints the appropriate slice of the *Newnumber*, after first suppressing an initial zero in this string of characters.

# The No.1 Football Game Now available for the BBC model 'B'

BBC Model 'B'  
ZX81 16K  
ZX Spectrum 48K

**Addictive**  
**FOOTBALL  
MANAGER**

## Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game are:

- ★ Matches in 3D graphics ★ Transfer market
- ★ Promotion and relegation ★ F.A. Cup matches
- ★ Injury problems ★ Full league tables
- ★ Four Divisions ★ Pick your own team for each match
- ★ As many seasons as you like
- ★ Managerial rating
- ★ 7 skill levels
- ★ Save game facility

**Addictive**

\* ZX81 Chart  
Home Computing Weekly 212 84

Comments about the game from press and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro... To the ordinary person it is an excellent view of what can be done in the field of computer games. The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a save to tape option. FOOTBALL MANAGER has everything it could... The

original. Addictive Games, certainly deserve the name." Rating 19/20 (Practical Computing – August 1983)

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems." (Personal Computer Games – Summer 1983)

### Programmers

We want your software! Send us a sample if accepted, we will supply generous royalties plus cash advances plus free advice from Kevin himself!

Versions coming soon for  
**Commodore 64**  
**Dragon, Oric**  
**and Atmos.**

Action from the Spectrum version

"I am writing to say what a great game it is. I have spent over 45 hours on it." (Mr E. Fearn – Gloucestershire.)

Available from computer software stockists nationwide, including **John Menzies**

Prices: BBC Model B £7.95  
Spectrum 48K £6.95  
ZX81 16K £5.95

(NB 3D GRAPHICS ARE NOT INCLUDED IN THE ZX81 VERSION)

## Character designer

**Mark Lawrence** provides a two part machine-code program to help you define graphics on the BBC

Most home micros now have the facility available to define your own graphics, but this usually involves sitting down with a piece of graph paper, designing your character and then calculating the relevant numbers that have to be stored in a place in memory, set aside for such a purpose. This character generator will relieve you of

this tedious task since it allows you to develop and modify your designs and then save them to tape for later use.

The program offers the following facilities as well as the actual designing of the character:

Rotate clockwise 90 degrees. Mirror character. scroll character (up, down, left or

right), invert, save to tape and load from tape.

To keep the program compact and to add speed I have written it in machine code. Unfortunately, since it uses a Mode 1 screen, 32K ram is required which means it will not work on an unexpanded Model A.

Before entering the first part of this two-week program switch the machine off, then on and enter `page=page+3000`. Now enter the program and save it.

The second part of this graphics utility will be printed next week.

on standard ZX-81 16K

Actual ZX-81 Screen Display!

- |              |                |                   |
|--------------|----------------|-------------------|
| 1. Diamonds  | 5. Fuel Cans   | 9. Player         |
| 2. Sea       | 6. Rocket      | 10. Bubloid       |
| 3. Platforms | 7. Vulture     | 11. Fuel Gauge    |
| 4. Ladders   | 8. Leg of Lamb | 12. Men Remaining |

Get rich quick by collecting Diamonds that are simply lying there waiting for you!

Oh... I forgot to mention that there are one or two problems! There is an expanse of Shark infested water between you and the Diamonds and a strange breed of Bubble that seems hell bent on getting you in it! Somehow you must cross it...

You have a Rocket Pac to help you (a Vulture on higher levels) but you must rush around the platforms and ladders collecting cans of fuel (legs of lamb with the Vulture) and cursing that weird Bubble. Once you have enough fuel then it's Chocks Away!

Oh... but don't run out of fuel on the way - otherwise it's .... SPLASH!

The aim is to collect all the diamonds from the far left hand side of the screen, whilst avoiding the rampant Bubloid. These emerge from the sea and are hell bent on returning to their watery habitat with you in tow. Sooner or later you are going to end up in the drink - The idea is to make it later!

By belting round the system of platforms and ladders, cleverly avoiding the Bubloid, you collect the fuel cans which appear in random positions, until you consider that your fuel gauge indicates sufficient in the tank. Now you can go and collect your rocket. With the rocket pack strapped to your back you can fly across the expanse of sea to collect the diamonds... but don't run out of fuel or your rocket pack will simply disappear and you will wind up in the drink!

There are six stages with six different platform layouts. On stages 1-3 the Bubloid, which floats in front of the platforms with uncanny ease, gets an ever increasing ability to home in on your position, making the task of staying alive more demanding with each stage. On stages 4-6 you once again start with the easiest Bubloid (which is a blessed relief!) but the fuel cans are replaced by legs of lamb which you must collect to feed your vulture, and once it has enough energy (or you think it has!) you must flap across the water on its back to collect the diamonds.

Extra men are awarded for every 10,000 points - but ONLY once you have collected all the diamonds and so completed each particular stage.

GOOD LUCK!

# Blitz on New York

Jason Orbaum and Geoffrey Campbell begin a new short series on Dragon assembly programming

The idea in this new series is to develop a complete game program written in assembler. We decided on one where not many things happen at once, and settled on *Blitz*, which is relatively easy to program, whilst still demonstrating quite a few useful routines.

For all those who have not heard of *Blitz* (both of you!), you pilot a plane that is running out of fuel, flying over New York. As you are running out of fuel, you must clear a landing space on the ground beneath by bombing the buildings and successfully land.

The first part of the *Blitz* program will be published next week, and for now we'll look at how the game was developed. A flow diagram is shown in Fig. 1.

The initialisation routine comes round first after the start — divided into two boxes. They are split like this because some of them are at the beginning of each new wave and the rest, for example the score, are only reset at the beginning of each new game. The next stage is to clear the screen, and then the buildings are constructed. We will explain the workings of the various routines when the listing is published.

Next, the program checks the co-ordinates of the plane. If it is in the bottom right hand corner — the position after successfully landing — the program flow is diverted to set up a new wave. Otherwise it carries on and moves the plane across one position. A check is then made to see if the plane has crashed. If it has, then the score is presented, and the game pauses until a key is pressed. If this key is the apostrophe (shifted seven) then the program returns to Basic (or the assembler if it is being run from there). If not a new game begins.

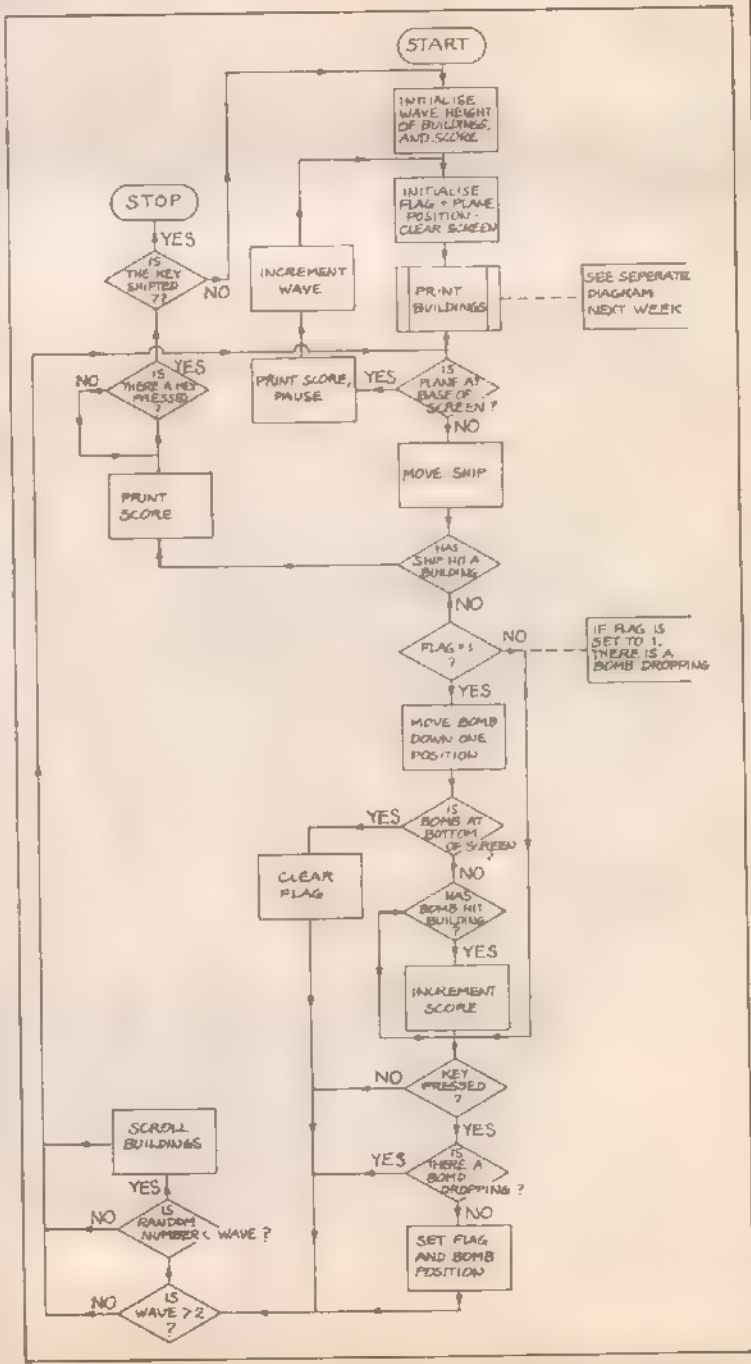

If the plane has not crashed or landed, the program must check to see if a bomb is dropping. If so, the bomb must be moved one space down, checking to see if the bomb has hit a building or reached the ground, and taking the appropriate actions.

The keyboard is now read, using a method that will be discussed later, and if a key is depressed and there is not a bomb already dropping, a new bomb is released.

Now we come to the unusual feature for this version of the game — buildings that grow. If the wave is greater than three, and a random number is in the desired range, the buildings (provided they are not in the row beneath the plane) scroll up one position.

This explains the flow chart in broad terms, and we will look at the first of the routines in detail next week.

If you reckon you can't wait till next week for the listing, try writing part of the game using the flow diagram as the basis and see how you get on.

# FASTBACK IS HERE

A TYPICAL COMMODORE 64 OWNER WAITING FOR A PROGRAM TO LOAD FROM TAPE... BUT NOT ANY MORE!

At last a utility that provides fast-loading. FASTBACK allows multi-part software to load around 10 TIMES FASTER and run independently of the utility. For example: load 'The Hobbit' in 150 seconds with FASTBACK.

Supplied on tape with full instructions

ONLY £9.95

### THE AMAZING NEW PROGRAM FOR THE 64

Gives unlimited vocabulary and can be incorporated into your own programs using "SPEAK" as a basic command.

ONLY £7.95 NOW YOUR TALKING!

### AND FOR DISCO

Our latest and most sophisticated Tape-to-Disc utility is so easy even a child can use it. DISCO creates its own buffer steps to ease the job of transfer. All programs auto run once transferred. We guarantee this is the best Tape-to-Disc you can buy.

Supplied on tape with full instructions

ONLY £9.95

### TAPE TO DISK TRANSFER UTILITIES-

Transfer games etc. to disk. Supplied on tape with full instructions for

BBC

ATARI (All models)

£9.95

### DATA RECORDER

From the same factory as the £24.95 Super Saver 2000 Data Recorder (no interface required)

£29.95

HUGE RANGE OF SOFTWARE & BOOKS FOR BBC, ELECTRON, SPECTRUM, COMMODORE 64, VIC 20, ORIGIN, ORANGE, HEROTEC & ZX 81.

# If you've ever been killed by the evil goblin, flamed by a dragon or turned to stone by a wizard...

then you need Micro Adventurer - the new monthly magazine devoted to all microcomputer adventures, war games and simulations.

Each issue offers a wide range of stimulating features, including:

- Helpline and Contact columns
- Reviews of the latest adventures
- Competitions with exciting prizes
- War gaming advice
- Adventures to type and play
- Profiles of famous adventurers
- Advice on how to write your own adventures

If this sounds too good to be true then fill in the form below to make sure you receive your copy of Micro Adventurer.

#### SUBSCRIPTION ORDER FORM

Please send me 12 issues (a year's subscription) of Micro Adventurer beginning with the \_\_\_\_\_ 35.32

Name \_\_\_\_\_

Address \_\_\_\_\_

Signature \_\_\_\_\_

Date \_\_\_\_\_

This order should be accompanied by a cheque made payable to Micro Adventurer.

**UK subscribers**

A year's subscription is £10.00 - please send this form with payment to Micro Adventurer, Subscriptions Department, Oakfield House, Park Hill, Haywards Heath, Sussex.

**US Canadian subscribers**

A year's subscription at a expedited rate is US\$33.95 - please send this form with payment to Micro Adventurer, c/o Business Press International, 205 East 42nd St., New York, NY 10017.

# Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

## Shoot A Star

on Vic20

Shoot-a-star is for the unexpanded Vic 20. You may have thought that controlling 4 ships in an unmentioned Vic game was hard

enough, but this is it. You must have supreme control of SEVEN laser bases, with which you must save the Earth from marauding mutated Martian Elephants.

For bonus points, hit the planet(s?) of Mars itself. You control your seven ships using the number keys 1 to 7 for firing each one (1-Left to 4-middle to 7-Right). Unfortunately, when an elephant reaches Earth it

chooses a random Laser base and blasts it into a bit of space-junk (making it unuseable in the process). Beware, when all laser bases have been lost, the Earth has no defences, and the planet is doomed to be trodden on.

### Program notes

Lines 10-48 Set up screen  
Lines 70-98 Laser bases-Has 1-7 been pressed?  
Lines 1030-1180 Laser base kaputt  
Lines 2000-2040 The Earth has been trodden on...  
Lines 3000-3070 Loop to check for bases kaputt.

Shoot A Star  
by M Valentine

## Screen

### on Dragon

How many times have you seen the output you need disappear off the top of the screen? Here is a set of simple Basic subroutines which will memorise the screen for you and banish such problems forever.

To incorporate the routine in your program, set N as the number of lines to be copied, and if necessary, reset M, the start of the memory to be used, then Gosub 360. Copy as few lines as possible at each stage, since the program is fairly slow, then clear the screen. On recall, using Gosub 480, the complete set of recorded lines will be reproduced page by page, in an interesting highlighted fashion. The speed-up Poke

68495, 0 may be added if it is compatible with your machine.

#### Program notes

100-140 Demonstration screen.  
180 Initialise variables.  
220-270 Select memorise or recall.  
310-340 Input number of lines.  
350 Store line total.  
360-440 Memorise.  
480-520 Recall first page.  
530-560 Next page routine.

## Origami

on BBC

This simple graphical program produces random black and white patterns similar in appearance to origami models. The whole program is random so to achieve the results

you want just keep re-running the program by pressing escape.

If you like a pattern then press any key and it will stop until you press a key again.

```

## Arcade Avenue

### Dragon review

Following recent hiccups in the fortunes of the Dragon some machines can be picked up for as little as £60. Such bargain prices will mean that a lot of new Dragon owners will be interested in what games are worth buying. As with all home micros, the quality of software has been increasing, but there is only time for a quick review of some of the best here. As with the Spectrum and Vic, apparent hardware limitations are overcome or made unimportant by good programming and games design. Thankfully, we are also starting to get away from the all pervading green backgrounds that made reviewing Dragon games such a headache.

I get a huge amount of mail about A&F's *Chuckie Egg* and one day soon I will devote a whole avenue to the various high scores and dips. This ladder-climbing, hole-jumping game has smooth graphics and a good keyboard response which makes it very playable. Available on a range of micros, it should not be mis-

sed. I can guarantee its lasting appeal.

*Hungry Horace*, an old Spectrum chestnut from Melbourne House, is a Pac-man derivative that continues to reappear on other machines. It's worth a look, as is *Mined Out* by Quicksilver, another old and simple Spectrum game that keeps some lasting appeal due to the need for a degree of logical thought and strategy.

*Arcadia* and *Leggit* are two evergreen Imagine releases, the first a straightforward zap game that despite graphics and sound that are less than amazing these days, somehow has a lasting charm. *Leggit*, which is *Jumping Jack* on the Spectrum, is a furious and maddeningly addictive game where you frantically run around several platforms, trying to jump up through moving holes to reach the top of the screen.

Ocean's *Hunchback* appears to be their only game available for the Dragon but this is the peak of the arcade game copiers art and contains all the screens of the original game with high

quality graphics.

Hewson Consultants' three games in the Seiddab series, *3D Space Wars*, *3D Seiddab Attack* and *3D Lunattack*, are available for the Dragon as well as the Spectrum. These games are very clever but get a mixed reaction from people who play them. Personally I think they are very good, but you may be advised to see them for yourself before buying.

*Ugh!* by Softek is a very colourful and fun game set in prehistoric times with cavemen and various dinosaurs to avoid. It has proved so popular that it is actually being converted to other machines such as the cbm 64 (an amazing step up for a Dragon original).

Slightly out of my field but well worth mentioning is a war strategy game from Beyond called *Kriegspiel* that is supposed to be very good. For further information on this as well as adventures for the Dragon, I suggest you read *Micro Adventurer*.

Finally, but possibly most importantly, is *Microdeal* of St Austell (who I think also pro-

duce Tom Mix software). They have so many good games that I cannot begin to mention them all. They are perhaps best known for their Cuthbert games, most of which are well worth buying, but look out as well for their arcade copies of *Frogger*, *Skramble*, *The King* (a very good *Donkey Kong*) and *Eightball* (*Video Pool*). *Danger Ranger* should be good because it is also being released for the Atari and the Commodore. Because it is supposed to be one of the best Dragon games available, *Buzzard Bait*, new from Tom Mix, was chosen to be the first game with the 'dongle' anti-pirating device. Unfortunately, we could not get it to load. However, *Touchstone*, another very recent release is, I hear, extremely good. Check it out.

Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

# Tony Bridge's Adventure Corner

## Game savers

The Quill has a lot to answer for — now it is no longer the horrendous job of coding that will put budding authors off writing their magnum opus, merely lack of imagination! But the first of the Adventures that we look at this week is not Quill'd.

*Treasure of Meathos* is written and marketed by J. Copland. The volcano of Meathos contains the tomb of the long-dead King of Natocria and his Queen... There is a monster, created by the evil Wizard, which is roaming around the complex where you start the Adventure. You are not alone — a constant friend is Boris Blackridge, who appears whenever you ask for Help, and will suggest a course of action (if you're lucky!).

I'm afraid that I have lost Mr Copland's address, but please write to me, and I will publish the information. Now to the Quill'd Adventure for this week! It's a *Myth-tery* is from Mythsoft, and the author is A J Roberts. Like all Mythsoft programs, this present adventure is offered at the very reasonable price of £3.00. At the start, the player is presented with a book — that's all, and it is up to him to find out the purpose and aims of the Adventure. As Mythsoft say, when reading a book, the reader would know nothing of what was to come. I can reveal, however, that the overall object is to free the Gods and Goddesses who are being held captive by The Mythologist.

There are only one or two of the obligatory spelling gaffes, but these are redee-

med by the touches of humour throughout the program. Whilst all the usual commands are recognised (and there's a new one that is usually only seen in games of much higher pedigree from the likes of Infocom, type *Exam Chrono*, and the game time is given), it's a pity that there is no Save Game facility. All in all, it's a *Myth-tery* is very capable adventure, and an excellent program with which to open a new catalogue. Their address is Mythsoft, 84 Elland Road, Brighouse, West Yorks HD6 2QR.

Classic Computing is another new name, and has just released their new adventure *The Curse of the Seven Faces* — I thought, at first, that its scenario might pay homage, somehow, to the old Agatha Christie novel *The Seven Dials*, but no, it is the familiar plot concerning Dragons, Elf-Kings, Wizards and so on.

Classic have obviously thought hard about the appearance of their program, and the screen is very colourful, with cyan text on a black background, although the magenta used for input is rather difficult.

The descriptions of the various locations are very colourful, too, with, for instance, 'hulduous faces', which 'appear and cackle loudly, before fading away before you.' Returning to many locations, but not all, means that an abbreviated description is returned, but the full text can be viewed again by typing *Look*.

Some 150 rooms or locations are included, and range from very small rooms, with not enough space to swing a cat (although I would advise trying it!), to mazes of rainbow-coloured rooms (only one of several mazes!) and Forests, Castles and Caverns. All the usual clichés are met, but dealt with in an ironic and, sometimes, mordant way.

The adventure plays very well, with sticky, but entirely logical problems which will succumb to hard, lateral thought.

But the feature that I like most, and is, as far as I know, absolutely unique, is the Game Save facility. Yes, I know most adventures include this but the one in *Curse* is rather different.

But how many times have you had to fiddle with the controls on the tape machine, prior to stepping into 'A Dark Cave from issues a low, animal growl? How ma-

ny times have you then been subsequently killed, only to find that you connected the leads in the wrong way, and have to start all over again? If you're like me (impatient to get on with things!), you will know how infuriating this can be! Classic must have trodden this same path, because they have included, in *The Curse of the Seven Faces*, the option to Save a game, as normal to tape, or, and this is the interesting bit, as a 'buffer'. This means that you can simply select '2' from the Save Game menu, and your present position goes into memory only, thus freeing you from fiddling about with tapes and the various controls.

Alan McDonald and Peter Galbavy (along with able proof-reader Zoe Meeson) are to be congratulated for producing an extremely well-crafted Adventure. I recommend it very highly. Classic Computing, 81 Harewood Avenue, London NW1.

Fergus McNeill of Delta 4 Software has written a suite of three Adventures, using *The Quill*. Going under the overall title of *The Dragonstar Trilogy*, this tape seems very good value at just £4.95. It's the usual tale of Princesses, which have to be rescued, and Dragons, which have to be fought. The locations in the first part are easily mapped, and there are at least two or three dozen of them, taking the player on a guided tour of a range of snowy mountains, damp caves, a large forest and a giant plain.

The second program seems to contain rather more to do. Going on to the other parts of the Trilogy seems to be easy, with no code words being required, but I am sure that various objects and knowledge will be required from the previous part in order to properly play the following parts. As I said before, good value, and a good romp for old & D's. Delta 4 Software, The Shieling, New Road, Swanmore, Hants.

*The Devil to Pay* is an Adventure by M J Balchin of Compulscope for Fun. A nicely-drawn cassette inlay card is not backed up by the cheap type-written set of instructions. You have been chosen to enter The Tower and retrieve the golden Apple (whatever that is) — 'Many have Gone Before, but none have returned. Can you?'

Well I can't, at least, not without some sort of crib sheet! The descriptions of each location are quite atmospheric, which is always a good thing, but the program is badly let down by the terrible layout and even worse spelling.

## Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may

be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Adventure Problem

Name  
Address

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want renewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

# Quite simply, be a better Spectrum user.

There's a lot more to the Spectrum than meets the eye. It's a powerful machine, capable of doing almost anything you can think of. And it's a machine that's easy to use. You'll find the answers, business, sound and intelligence. You'll find the for beginners, and machine code for boffins. You'll find you can really get the most from your Spectrum simply and straightforwardly.

Order your Spectrum books from Sunshine now. See them in your local bookshop, or use the coupon below.

# Peek & Poke

## US currency

S M Walker of Newcastle-upon-Tyne writes:

**Q** I occasionally buy an American computer magazine and read all of the advertisements for the Vic20. I would like to know how to apply for this equipment, as obviously, the currencies are different.

**A** You can arrange to send US currency via your own bank. This is probably the most convenient method of ordering goods from the USA (or indeed any other country).

## Vic20 modulator

Phil Whalley of Stanford-le-Hope, Essex writes:

**Q** I have just had to change my Vic20's modulator for the first time because it was faulty. I know of other people on their third or fourth. I wonder if there is a different more reliable make of modulator on the market that could fit to the Vic which would last longer. If you know of any, it would put me and many other Vic owners out of our 'silver box' misery.

**A** Nothing would please me more than to be able to say that I know of a reliable alternative modulator for the Vic. Unfortunately, I don't. It is an interesting fact that each of the popular home micros has its achilles heel. With the Vic it is the 'silver box'. With the Spectrum it is the keyboard. I am afraid that we have to ac-

cept that components will fail from time to time, and just hope it doesn't happen too often.

## Frequency value

Richard Hyde of Bourne End, Bucks writes:

**Q** Do you know any formulae I can use to calculate the frequency and duration of a note needed for the Rom routine at 3B5H on the Spectrum, ie, given Beep 0.5, how can I work out the required frequency and duration values?

Secondly, how can I use the message routine at 0C0AH.

**A** Probably the best formula I can give you is that used by the routine at 03F8H (the Beep command routine). This routine merely requires the pitch and duration of the note required to be put on the calculator stack, (pitch on top). This routine saves you having to worry about formulae and complex frequency conversions. I guess that what you want to do is use the ROM routines to produce textual screen displays. In that case I suggest that you set up the message to be printed, store an address of it in the A register, and call the routine at 0C3BH (PO-Save), once for each character to be printed (incrementing the A register each time).

## Scanning routine

Scott Ling of Kircaldy, Fife writes:

**Q** I have a 48K Spectrum and I am writing a game which uses the fn function. My problem is when keys Q to T are held down this makes fn 64510 take a value of 224. However, pressing any other key on the keyboard at the same time still gives the key the value 224.

For example: keys Q to T are pressed: fn 64510 = 224. Key C is also pressed: fn 65278 = 247.

Is this a fault on my Spec-

trum?

**A** Your problem is associated with the way that the keyboard scanning routines operate. If more than three keys are being held down at the same time it is possible for the effect you describe to occur. I managed to reproduce this effect twice in about fifty attempts. The other 48 times everything was OK.

You should try and avoid having to use more than three keys at any time in your program. To get round the problem you should keep the keys to be used well apart, ie, in different 'half rows'. That should at least ensure that you will be able to determine if any key in that half row has been pressed.

## American voltage

Gregg Whitbread of Chadwell-St-Mary, Grays, Essex writes:

**Q** I am a proud owner of a Commodore 64. I am shortly going to America and I wondered if you could give me some advice? I would like to purchase some software, a 1541 disc drive and a modem while I am over there. Will any of these work on my faithful 64?

**A** I would think that software would not be a problem on CBM64. It is certainly possible to use UK software tapes on US machines, and I see no reason why the reverse should not apply.

As far as the disc drive is concerned, you will run into electrical problems here. The USA uses a different standard for electrical equipment from the UK. The same applies if you purchased a modem in the USA.

You could get round the problem by using a voltage transformer (to produce the electrical current required by

the US hardware) but by the time you have done that it probably won't have saved you any money.

## Digital electronics

Steven Cox of Formby, Merseyside writes:

**Q** By mistake this week, my dad bought me a copy of *Sinclair Projects*, the hardware magazine. Even though what was explained inside was a little (a lot) beyond me, *Digital Electronics* really caught my imagination. Could you tell me of any simple books which you know of on this subject?

**A** There are quite a lot of introductory books with at least half a dozen in the *Teach Yourself* series. Without going into too much detail any one would be a pretty good first step into this field. One other thing you could consider if you are a Spectrum owner interested in finding out how your micro works would be the *Spectrum Hardware Manual*, published by Melbourne House. It is a very useful little book.

## On the market

S G Ruffell of Ogmores-by-Sea, Mid Glamorgan writes:

**Q** Could you tell me the best light pen on the market for around £20 to £30 for my 48K Spectrum?

**A** I am not going to risk my neck by saying which is the best — that would only be asking for trouble. But DKTronics make a quite nice light pen which retails at about £20. You can contact DKTronics at Unit 6, Shire Hill Industrial Estate, Saffron Walden, Essex CB11 3AQ.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek & Poke* to Phil Rogers and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke*, PCW, 12-13 Little Newport Street, London WC2R 3LD.

# MICRODRIVE ONE (MD1)

WE OFFER ON ALL OUR PRODUCTS A FULL MONEY BACK GUARANTEE an update service, and FULLY detailed, instructions with USER friendly programs. Match that!

## CROOKED CAT

Widgit software have released two educational games for the Spectrum, *Castle of Dreams* and *Adventure Playground*. The company has a good reputation for producing educational games that actually have some thought and purpose behind them.

*Adventure Playground* is actually two games in one — *Crooked Adventure* and *The Queen of Hearts*. Both have large graphics and text with plenty of colour. The actual games require a variety of skills like simple logical thought and strategy. *Crooked Adventure* has the child trying to move crooked cat and mouse to their crooked house. *The Queen of Hearts* sets the task of recovering stolen tarts. Clever, nice graphics and fun for kids.

**Program** *Adventure Playground*  
**Price** £7.95  
**Micro** Spectrum  
**Supplier** Widgit

## BOOTSTRAP LOADER

The first, to my knowledge, piece of independent QL software has arrived.

It's a collection of utilities supplied on a single micro-drive cassette.

There is nothing very drama-

tic here, of course — there couldn't be really, given the amount of time the QL has been out. On the other hand some of the utilities could be quite useful.

Boot is a bootstrap loader which displays directories in columns so that screen overflow can be avoided. It will load programs with a single key-press. Qmark does an automatic multiformat. Qback makes back up copies of cartridges and Qprune deletes nominated files from memory.

Given the horrendous price of microdrives £10.00 is probably not an especially rip-off price for these utilities, simple though they are.

In any event, many QL owners will be desperate for some independent software.

## WHITE NOISE

*Micro Olympics* is one of the many sport orientated games released recently. Mostly they are completely dire but this one — in its BBC form — has the virtue of having been to number three in the WH Smith chart.

The Spectrum version has now been released and it's not at all bad. Basically you have a choice between the three main areas of running, jumping or throwing. Within each of these there are quite a few choices —

*Anurog's House of Usher* has little to do with dear Edgar and a lot to do with Miner Willy — it's fair to say that the game owes a lot to Matthew Smith's eponymous program.

Nevertheless *House of Usher* is an excellent program with an opening graphics sequence that matches *Alice in Wonderland* for cartoon-like quality.

The game begins in the lobby of The House, where a leap is made into one of nine rooms each containing a different task. Tasks include collecting strawberries, dodging cannonballs, and avoiding getting squashed.

Each room is like a Miner screen requiring the familiar sense of timing and positioning of jump to be completed. The problem is you only get one chance at each room — fail and you are sent back to the lobby (Oh, no! Not the lobby).

If you manage to do all nine rooms then there are two more labelled X and Y which can be entered — wondering what's going on in them is quite an incentive to play again.

The graphics are entertaining and some of the fiendish

different distances for running, javelin or discus, hurdles or pole vaulting.

What's good about the program is the way you can choose your own keys for each section — the running sections, for example, require hammering away alternately on two keys and if your Spectrum keyboard is like mine you may not have many keys left that are up to such treatment. The graphics are reasonable but not staggering.

Less impressive, are the strange and interminable waits that crop up from time to time between stages and, on my copy at least, a couple of bugs that make the program hang up. Still, quite a lot of variety and a nice 'white noise' crowd effect if you do well.

## NOT THE LOBBY!

thinking required to solve the rooms is well up to Miner standards. In fact, my only (very wimpish, admittedly) quibble is that even after playing for half an hour I came nowhere near doing even one of the rooms. Whether you

think that this reflects on *Anurog* for making the game a bit difficult or me for being a pathetic player is up to you.

## SCREEN EDITING

For many people the Zeus Assembler is just about the best Assembler available for the Spectrum. Now the company that produced it, Crystal Computing, has produced Zeus for the Commodore 64.

What made Zeus the success it was was the excellence of its design — all commands are

single stroke, there is full screen editing and automatic line numbering.

The program includes a Monitor with 30 commands which enable you to inspect and alter the CPU registers and memory; these include *Disassemble*, *Trace* and *Tabulate*.

There is a brief manual that gives you enough information to use the package but will not teach you machine-code. This one is not for the beginner.

**Program** Zeta 7  
**Price** £9.95  
**Micro** Commodore 64  
**Supplier** Crystal Computing  
3 Ashton Way  
East Herrington  
Manchester  
SR3 3RX

## BAGS OF MONEY

Mogul is a company that seems to be pulling itself up the technical impressiveness ladder, ie, from the early naff games to the pretty impressive *Fire Ant*.

Now two more 'quality' games have been issued: *Zeta 7* and *Murphy*.

*Murphy* is a three screen maze game set in a mine. As is usual in such games you have to collect some things and dodge others but in *Murphy* it's done with much inventiveness and humour.

The unfortunate miner of the title roams through the old workings collecting bags of money and putting them in his wheelbarrow. To succeed he has to dodge a number of crooks who are also after the money (you can tell them by their stripy pullovers) and watch out for runaway carts. *Murphy* has some defence against these obstacles — he can jump up onto cross beams and jump into the cart rather than being bashed by it and he can biff the baddies with a pickaxe or drop money on them.

All this is neatly animated and is accompanied by a clever musical soundtrack. Playing the game for a while it became apparent that it's not all a matter of quick reactions — you also need quite a bit of strategy to figure out how to get

some of the bags. I liked it a lot.

**Program** Murphy  
**Price** £7.95  
**Micro** Commodore 64  
**Supplier** Mogul  
PO Box 4BT  
35-37 Wardour  
Street  
London W1

## EARTHLY PARADISE

*Quest for the Garden of Eden* is the latest of Phoenix's two-part Arcade/Adventure format games. And it's the first to be issued in a new style — the two programs on either side of one tape rather than two tapes in a large case.

The theme this time is go-back-in-time-to-stop-Adam-from-eating-the-famous-apple-and-thereby-maintain-the-earthly-paradise (yes, but what about original sin and free will, eh — surely some theological problem here).

The first program is a running and jumping game in which you must cross from one side of a bridge to another. This involves jumping over a spider using careful timing and watching out for a fish that spits at you. Make it to the other side and you can pick up some rocks and drop them on the fish. Rough justice?

Bop enough fish and you get the running code to begin the

adventure on side 2 of the program. This begins in the middle ages and using the usual adventure terminology of

Verb/Noun you must try to find your way back to the famous garden and save Adam from himself.

**Program** Quest for the Garden of Eden  
**Price** £5.99  
**Micro** Commodore 64  
**Supplier** Phoenix Software  
Spanglers House  
118 Marsh Road  
Pinner  
Middlesex

## BODY AND SOUL

*Star Trader* is a new program from Bug-Byte that seems to consist of every kind of games program ever designed all rolled into one. You could call it a Starventure, but it'd be better not to.

Your objective is to trade, buying and selling from planet to planet in the star system trying to make money and avoid pirates who will steal your goods (at the very least.) Pirate attack forms the main arcade section of the game — the screen shows the cockpit view and using shields and lasers you defend yourself from attack as best you can — there is a surrender option.

The graphics for the arcade section are very near indeed, sprites and 3D logic making the whole thing very atmospheric. Apart from that, what you get is a fairly complex kingdom type game you have to use planning and judgement to buy and sell goods at a profit whilst keeping body and soul together. This means eating, resting, etc, at appropriate times.

There's a good deal of thought involved aside from the arcade stuff, although I'm not sure that I can really be said to be much of an adventurer. For arcade and strategy, though, it's very good.

**Program** Star Trader  
**Price** £5.95  
**Micro** Spectrum  
**Supplier** Bug-Byte  
Mulberry House  
Canning Place  
Liverpool

## NUDGES AND GAMBLERS

Quite honestly I've never been able to work myself up into much of a frenzy over computer simulations of fruit machines — I mean what's the point when you can't win or lose anything. Still, people keep producing them so I guess people sell them so I guess people like them.

■ you want a fruit machine for the BBC then one of the best I've seen is *Superfruit* from Simonsoft. It's good partly because of its impressive hi-res graphics, but mainly because it has all the 'bits and bobs' that make fruit machine gambling what it is today, ie, nudges and gamblers.

These extras, plus clever sound effects make it highly playable — maybe you can get a member of your family to take your money away for you just like the real thing.

**Program** Superfruit  
**Price** £5.95  
**Micro** BBC  
**Supplier** Simonsoft  
25 Tatham Road  
Abingdon  
Oxon OX14 1QB

New Releases is designed to let people know what software is coming on to the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, Popular Computing Weekly, 12-13 Little Newport Street, WC2R 3LD.

## LISTINGS

**The Memotech MTX Program Book** is a book of listings. Ordinarily I would want to avoid such a tome. It's not that in this book the listings are particularly wonderful or radically different, it's just that the Memotech is really not a bad machine but hardly anyone is doing books/software for it. And it deserves a mention just because of that.

**Book** The Memotech Program  
**Price** £5.95  
**Micro** Memotech  
**Supplier** Phoenix Publishing  
14 Vernon Road  
Bushey  
Herts

terms as thrashing, refresh, informatics (it has to be American) and fetch cycle (not an instruction).

I found it moderately entertaining but some may doubtless find it invaluable.

**Book** A Dictionary of Computing Terms  
**Price** £2.95  
**Micro** General  
**Supplier** Fontana  
8 Grafton Street

## TRACER

Better than most books with similar titles is *Advanced Programming for the BBC Micro* by Mike James and S. M. Gee. Better because the 'advanced' information it contains is genuinely useful.

There are large sections on programming structure (particularly important in BBC Basic) and file and array handling — this latter being used in the development of a spelling checker (surely all BBC owners are perfect spellers already?). It ends, inevitably, with machine code, and has programs for a disassembler and an execution tracer.

**Book** Advanced Programming for the BBC Micro  
**Price** £6.95  
**Micro** BBC  
**Supplier** Granada Publishing  
8 Grafton Street  
London W1X 3LA

## FETCH CYCLE

If monadics operators you in a glitch (you can never find one when you want one) or if you thought that static storage allocation was waiting for a council house and, moreover, if you care about these things at all then you need *A Directory of Computing Terms* — recently published by Fontana.

It will explain all the above terms, and more. A total of over 25000 entries including explanations of such wonderful

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## A changing world

Another software company — Imagine — has collapsed: this time the collapse is not only into financial disarray, but also into open disagreement.

Without bothering about the rights and the wrongs of the affair, and there will be rights and wrongs, the dispute has a rather more general relevance. At one time not so very long ago software houses like Imagine were thriving with so much money boosting the coffers that small disagreements would seem trifling.

That money is no longer coming in at a rate that will produce the enormously rich, with enormous cars, who were to arise from the ranks of the programmers. Unfortunately, writing programs is not that difficult a job, and there are many people who can do the job well: they cannot all be millionaires.

The problem with Imagine (and nearly every other software house) is a lack of imagination. It has been clear for a year (readers of Ziggurat will remember) that the software and hardware market was changing. Not the minor change to a *Jetset Willy*, or a *Sabre-Wulf*, or an *Alchemist*, but to an entirely new direction.

More people now seem to want serious software, useful software, and not Megagames — though what counts as useful or serious can vary tremendously with the individual.

Leo Scanlan wrote (in *IBM PC Assembly Language*, 1983) "Intel made a quantum leap forward in 1978 by introducing the 8086". This is where the action is. The first 'quantum leap' in computing was the Intel 8086 chip. The Sinclair QL may or may not be the second but the point is that quantum leaps are the order of the day.

I believe that the public has more imagination than many of the firms trying to make money out of computing. It is discriminating: most computer publishers of books, magazines or software still seem to treat all machines and all individuals in a like manner. The "Don't knock a winning combination" attitude seems to rule.

The more perceptive realize that owners of BBC computers tend to be different type of person to the owners of Commodore computers. It is to be suspected that the owners of the QL will not be the same type of person as the owner of a Spectrum. Look at reviews of the QL, look at the books, hardware add-ons and associated QL paraphernalia. Does it come across that the QL is a distinct machine, with a new distinct philosophy? Just because a person has a wealth of experience with the Spectrum, and most people have, does this mean that he or she will have some special affinity with the QL as a machine?

Commentators seem unwilling to examine the ideas behind the QL (or any other machine) or do not understand that there is a philosophy. I will treasure for all time the comment of one young journalist that the most exciting thing on the QL was the real-time clock (this is true!).

The quantum leap did not arrive with the QL, it happened before. And there have been others since.

Unfortunately, few computing 'professionals' realise that their world is continually changing, and that new ideas then are old ideas now.

Boris Allan

## Another brain teaser

### Puzzle No 116

Bob, the printer, had another brain teaser for me the other day. He was printing a book and in numbering the pages, he had used as many pieces of type with the digit '1' as he had used '2's and '3's together.

1 2 3

As an example, if he had numbered from 1 to 12, he would have used five '1's, two '2's and one each of the other eight digits.

It was fairly slim volume, but the only information he would give me was that the highest numbered page was odd.

How many pages were there?

### Solution to Puzzle No 111

As we know the sum is 13 and 17 — and must also be divisible by 221, the product of 13 and 17.

The program substitutes variables *x*, *y* and *z* for the missing digits, and divides the 'reconstructed' number by 221. If this results in an exact division, the result is printed.

```
10 FOR X = 0 TO 9 DO FOR Y = 0 TO 9 DO FOR Z = 0 TO 9
40 LET T = 7 * 10000000 + 1000000 + 88 * 10000 + Y *
1000 + 84 * 10 + Z
50 LET D = INT (T) THEN PRINT T
60 NEXT Z
70 NEXT Y
80 NEXT X
```

Of the possible solutions only one has the digit '3' as one of the missing digits, so this must be the answer: 758688343.

### Winner of Puzzle No 111

The winner is: HD MacGregor, Ashtree Road, Frome, Somerset, who receives £10.

### Rules

If the puzzle can be sensibly solved using a computer then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 116 is 3 August.

## The Hackers

Going up-market was the best thing we ever did. No more hordes of kids to contend with.

Anyway, closing time again.

Right you lot... OUT! ... NOW! Don't you have homes to go to?
